

Claims

1. Receptacle, on the outer walls of which hollow bodies are provided for receiving locking devices for locking to receptacles of the same kind,

characterized in that

the receptacle has, on its outer sides, means which engage in means, of the same kind, of adjacent receptacles, position the receptacle in a defined manner in relation to the adjacent receptacle or the adjacent receptacles and horizontally lock the receptacles together.

2. Receptacle according to Claim 1,
characterized in that

the means are arranged in the corner regions of the receptacle.

3. Receptacle according to Claim 1 or 2,
characterized in that

U-shaped, hook-shaped or bent-round guide rails are used as the means.

4. Receptacle according to one of Claims 1 to 3,
characterized in that

the means have upper sections which are bevelled in a manner sloping from the outside inwards.

5. Receptacle according to one of Claims 1 to 4,
characterized in that

at least one region of the means has lower sections which are bevelled in a manner sloping from the outside inwards and/or from the inside outwards.
